OCT 21 2003

1. (Currently Amended) A method of forming a bidding auction over a remote information server, comprising:

A  
hosting an internet auction on a computer by allowing each of a plurality of users to view a current bid and place a new bid for an item in an auction; and

automatically updating a view seen by at least some of said plurality of users on other computers to reflect a list of other bidders on the auction, and to reflect a change in a current highest price on said item, without requiring an action by said some of said plurality of bidders for said automatically updating.

2. (Currently Amended) A method of bidding on an auction over a remote information server, comprising:

hosting an Internet auction for an item on a first computer connected to the Internet;

allowing placing a bid in an auction over a remote information server bids for amounts to purchase said item from a second computer, connected to the Internet; and

defining a time profile for the bid, where the time profile specifies at least one amount of a bid to be set at a specified time in the auction other than a current time

storing information on the second computer about bids on the item, which information is not viewable at the second computer, but which information allows local

Appl. No. : 09/669,805

determination, at the second computer, of whether an entered bid is higher than a current bid amount without contacting said first computer.

3.  (Cancelled)

4.  (Cancelled)

5.

5.  (Currently Amended) [[A]] The method as in claim 2 wherein said placing comprises providing bids are provided to an agent program, which keeps the amounts of the bids secret until a time that is specified by the bid.

6.  (Cancelled)

7.  (Currently Amended) A method of conducting an auction on the Internet, comprising:

on a computer connected to the Internet, first hosting conducting a first portion of the auction in a mode where users view an item, and a price for the item, in an non-interactive manner; and in which users can place bids on items, and in which a current highest bid can be requested by another computer connected to the internet; and

second hosting conducting a second portion of the auction in an interactive manner, in which the auction participants place real time bids, which real time bids are seen automatically by other participants in the auction.

10. (Cancelled)

11. (Cancelled)

12. (Cancelled)

13. (Currently Amended) A method of automated auction bidding,  
comprising:

on a first computer connected to the Internet, hosting an auction which allows  
allowing a plurality of users to bid on an item, where one of the plurality of users has a  
highest bid, and at least one other of the plurality of users can bid an ~~amounts~~ amount  
that exceeds said highest bid, said first computer displaying said highest bid, and  
keeping secret any maximum bid amount that is higher than said highest bid; and  
enabling a quick bid function whereby a user can automatically bid an amount  
which will win the auction, ~~said amount being an amount sufficiently high to overcome~~  
~~all existing with a single click bids.~~

14. (Currently Amended) A The method as in claim 13 wherein there are  
a plurality of bids, some of which are known and others of which are secret, and  
wherein said quick bid only overcomes those bids which are known.

15. (Currently Amended) A The method as in claim 14 wherein said  
plurality of bids includes a plurality of bids, associated with times when those maximum  
bids can be made, and only those bids whose times have been reached are known.

Appl. No. : 09/669,805  
Filed : September 26, 2000

16. (Currently Amended) A The method as in claim 15 further comprising enabling an action which allows determining both secret bids and non-secret bids.

A 17. (Currently Amended) A The method as in claim 16 wherein said action includes an extra fee beyond that which would be charged for only non-secret bids.

18. (Currently Amended) A system, comprising:  
a server running a program that displays information about an item to be auctioned, and accepts bids on said item, and keeps track of a maximum bid; and  
a client, enabling and sending a bid to said server with a single click which includes an amount of a bid, ~~and a time when said bid should be placed, wherein said time is other than a present time.~~

19. (Amended) [[A]] The system as in claim 18, wherein said server automatically updates at least one screen being seen on at least one client to automatically show new bid amounts.

20. (Amended) [[A]] The system as in claim 18, wherein said client allows sending a plurality of bids, to be executed at a plurality of times.

Appl. No. : 09/669,805  
Filed : September 26, 2000

21. (Amended) [[A]] The method as in claim 13, wherein an amount of said quick bid is displayed responsive to a specified action by the user.

*A* | (New Claims)

22. (New) The method as in claim 2, wherein said auction is one in which the server stores maximum bid amounts by users, but only displays a current bid amount without displaying said maximum bid amount, and wherein said values stored at said second computer determines whether an entered bid is higher than said maximum bid amounts.

23. (New) The method as in claim 7, in which users can not view information about other bidders in the auction during said first portion of the auction, but can view information about other bidders on the auction during said second part of the auction.

24 (New) The method as in claim 7 wherein said second posting comprises displaying information on client bidders who are currently bidding on the auction.

25. (New) A method, comprising:  
on a first computer connected to the Internet, hosting an Internet auction for at least one item;

**Appl. No.** : **09/669,805**  
**Filed** : **September 26, 2000**

accepting bids on said at least one item, and displaying a current price for the item, and keeping secret a current maximum bid which has been placed for the item; and

allowing a second computer connected to the Internet to place bids on the item, and displaying an icon which allows a bid to be placed without contacting said first computer.

A)

26. (New) The method as in claim 25, further comprising running an applet on said second computer, which includes information enabling determining whether an entered bid is higher than said maximum bid.

27. (New) The method as in claim 25, wherein said icon enables placing a bid which is high enough to exceed said current maximum bid.

28. (New) The method as in claim 25, further comprising, in said second computer, determining whether an entered bid is higher than said secret maximum bid amount, and informing a user at said second computer without contacting said first computer.

29. (New) The method as in claim 25, wherein said icon allows said bid to be placed using a single click.
